

## APV - successful participation at Agritechnica 2019

The Agritechnica 2019 in Hanover closed its doors last Saturday. This year's motto was: "EVEN BETTER - EVEN MORE VERSATILE - EVEN MORE INTERNATIONAL!" The APV consultants of sales, service and product management of the headquarters in Dallein (Austria) were on site, as well as representatives from all six APV subsidiaries in America, Germany, Poland, Romania, Russia and Turkey. Not only Central European customers, but also distant markets were able to discuss their market inquiries directly at the exhibition booth and take home the appropriate solution.

"We received a record breaking number of visitors on our APV booth!", reports CEO Jürgen Schöls. "The growing internationality speaks for itself and actually makes the Agritechnica to the world's leading trade fair."

This year, APV puts great emphasis on issues concerning crop care and presents the incomparable Tined Weeder Pro (VS) - with its unique tine spring system, mounted Pneumatic Seeder, wheels in the rear and carbide plating on the tips of the tines - besides the proven Tined Weeder (AS) and the Rotary Hoe. Further optional innovative equipment features for these machine types will go into serial production from the beginning of 2020.

The Agritechnica was the starting shot for selling the LIQUID FERTILIZER. Since many years APV holds the expert status for precise metering of seeds and now opens up the field of liquid dosing with the LF 600 M1. The new innovation was presented for the first time, started selling in series with the Agritechnica and is released for sale all over the world.
