

APV winter service equipment - professionals in ice and snow removal

The winter service equipment from APV is ideally suited for private use up to professionals in the municipal sector.

WD 40 M2 - small but powerful

The WD 40 M2 convinces by its versatile applicability on various devices. Whether on the ATV, the pickup tailgate or a trailer coupling. The assembly is as easy as the operation of the spreader itself. The spreading width can be easily adjusted between 1-5m, even during operation. The dosage is stopped precisely at the push of a button so that the spreading material only lands where it is supposed to.

With a hopper volume of 40 litres (approx. 50kg salt), you are well prepared for the next winter.

UDW 100 M1 - Universal through the winter

The UDW 100 M1 is a reliable device for professional winter service. Its potential is fully exploited with the stainless steel metering unit, which is equipped with a seeding shaft for precise metering. No matter whether salt or fine-grained grit. With the UDW 100, you are well prepared for all situations. The hopper holds a volume of 105 litres (approx. 120kg salt)

The fully electronic regulation of the control box makes it possible to adjust both the working width and the application rate while driving from the driver's seat. In addition, special features such as a calibration test for precise metering and an emptying process for complete emptying of the spreading material are also available.

UDW 250M1 - the great universal one

Would you like a little more? Then choose the UDW 250 M1 today. Enjoy all the advantages of the UDW 100 with an extended hopper volume of 250 litres (approx. 280kg of salt). This makes the UDW 250 ideal for operational or municipal use. The UDW can optionally be equipped with lighting for use in the early morning hours.

To extend the functionality of the UDW series, we also offer an optional shovel holder (broom, snow shovel etc.) and a calibration slide for the calibration test.
