

The agony of choice

Agriculture is more diverse than almost any other industry. A wide variety of factors often confronts farmers with decisions that are not easy to make. Whether it is the right choice of tillage, seeding time, seeding quantity, harrow timing, etc. Above all, however, when the decision has to be made on the right investment, which should have a useful function on the farm for as long as possible.

For this reason, machines get developed by various agricultural machinery manufacturers in order to be able to offer a suitable machine for all requirements.

APV offers individual solutions for your farm

The company APV offers a diverse product portfolio for many applications. From seeding technology in various designs to grassland maintenance, crop maintenance in arable farming or municipal equipment - APV has the right machine for every area in its product range.

In order to find the right solution for every farm, you can choose between many variants and additional equipment, which are mounted ex works. Especially in the field of sowing and spreading technology, there are many different customer requirements, such as the choice of the right seeding shaft. In grassland and harrow technology, the choice of tine thickness is often a decisive criterion for purchase.

These and many other different requirements are offered for you with a wide variety of solutions.

Let an APV sales partner or APV sales representative configure your personal machine individually. Your future device is thus optimally adapted to your farm!
